Para la realización del proyecto debemos instalar algunas dependencias, una de ellas es pip install django

Después realizamos la creación la carpeta del proyecto

Después en la misma consola creamos la carpeta del proyecto

```
Requirement already satisfied: sqlparse>=0.2.2 in c:\users\full_stack\appdata\local\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\programs\
```

Realizamos la inicialización de la aplicación y le ponemos el nombre que más nos convenga, en este caso ya la tenemos creada

```
Full_Stack@NumezDeveloper MINGW64 ~

$ python manage.py startapp app

C:\Users\Full_Stack\AppData\Local\Programs\Python\Python?

Full_Stack@NumezDeveloper MINGW64 ~

$ |
```

- √ app
 - > migrations
- __init__.py
- admin.py
- apps.py
- models.py
- e tests.py
- views.py
